The problem of the lack of academic readiness of high school students for college is a critical one in today's economy. It is becoming increasingly difficult to compete in the job market, and positions that might have been given to people with little experience are being passed to those who hold college degrees. The possession of a college degree communicates something to employers that may not be said for candidates who have not gone to college. Therefore, being prepared for college is essential, and a high school diploma does not guarantee that a student is prepared to undertake postsecondary level courses. In fact, many students are not prepared for college-level work and are required to first complete remedial or developmental courses before starting to accumulate credits towards a postsecondary degree. The purpose of this study was to examine the effect of an enhanced summer college readiness program on students' academic self-efficacy scores. The intended goal was to determine whether or not college readiness programs increase or improve high school juniors' academic self-efficacy. Two research questions were examined: 1) Was there a difference between high school juniors that completed the new enhanced summer college readiness program and those who completed the regular summer college prep workshop in academic self-efficacy scores? and 2) If academic self-efficacy scores were significantly different for students who participated in the new enhanced summer college readiness program, to what extent could this significance be attributed to the program? Academic self-efficacy data were gathered from high school juniors prior to participation in, and again at the completion of, the program. The participants were high school juniors who had identified interest in a summer college readiness workshop at a private midwestern university. The college academic self-efficacy scale (CASE) was the instrument used. See Appendix A. The study used a Solomon four-group experimental design. There were two experimental and two comparison groups. One experimental and one comparison group were pre-tested, and all four groups were post-tested. The results from quantitative and qualitative data showed that the new enhanced summer college readiness program improved academic self-efficacy better than the current summer college prep workshop.

Giving students the tools they need to succeed in college and work, college and career ready offers educators a blueprint for improving high school so that more students are able to excel in freshman-level college courses or entry-level jobs, laying a solid foundation for

lifelong growth and success the book is filled with detailed practical guidelines and case descriptions of what the best high schools are doing includes clear guidelines for high school faculty to adapt their programs of instruction in the direction of enhanced college career readiness provides practical strategies for improving students content knowledge and academic behaviors offers examples of best practices and research based recommendations for change the book considers the impact of behavioral issues such as time management and study habits as well as academic skills on college readiness
